Name: European AI Scanner

Value Chain: Onboarding, Monitoring, Detection, Reporting and Processing & Control

Sub-Sectors: Risk Management

Regulation/Legislation: European Union AI Act ("EU AI Act")

Offering

European AI Scanner, an AI & Partners' product, risk assesses AI systems under the EU AI Act and treats AI system information for better decision making and increased efficiency. It risk assesses AI systems with increased efficiency, regardless of their underlying characteristics.

Problem Being Solved

AI & Partners helps with the initial and ongoing risk assessment of AI systems when they are imported, developed, deployed, used and/or distributed in the European Union. The company provides a holistic perspective because it offers an institutional-trade platform that has been rigorously battle tested.

Technology

AI & Partners' platform includes third-party integrations – an integrated solution that allows a comprehensive risk assessment of AI systems to be undertaken. It runs AI systems through a series of assessments on a consolidated platform that clients can audit and automate to meet their needs.

Product Description

AI & Partners' product offerings include:

- **Risk Assessment Framework:** European AI Scanner employs a comprehensive risk assessment framework aligned with the requirements outlined in the EU AI Act. It considers factors such as the AI system's intended purpose, capabilities, potential impact on fundamental rights, safety risks, and ethical considerations.
- **Risk Categorization:** Based on the assessment, European AI Scanner categorises the AI system into risk levels defined in the EU AI Act, such as unacceptable risk, high risk, limited risk, or minimal risk. This categorisation provides a clear indication of the risk level associated with the AI system.

Traction/Growth

- AI & Partners has been recognised by a US-based think tank and recommended to the UK government as a preferred supplier.
- AI & Partners has received domestic endorsement from top UK-based professional services firms for its execution capabilities.
