European AI Scanner – Comparison Sheet

Date: 17th June 2023

Our solution is the world's first regulatory technology ("RegTech") product focusing solely on the risk classification of AI systems under the European Union's ("EU") newly voted Artificial Intelligence Act (the "EU AI Act").

We have built a cutting edge tool to allow our clients to risk categorise their (and their clients) AI systems to comply with the EU AI Act. As at the date of this document, no other solutions on the market can do what our RegTool tool does, giving us an unparalleled competitive advantage.

Tailored functionality available on a market-accepted platform used for a similar European regulation
